

FlagQuantum distributed MPS: 131,072 qubits on 16×A800

Two nodes · complex64 · $\chi=768$ · measured batch-one training · 16/16 useful ranks · 15/15 forward/reverse boundaries · expandable CUDA segments

131,072 MPS sites = 131,072 qubits | $\chi=768$ | max cut entropy $\log_2(\chi) = 9.58$ ebits

Entanglement-limited MPS simulation; not arbitrary 131,072-qubit statevector capacity. Development evidence.
